

TKC 2023 workshop on transport and economic prosperity – identifying research and data for achieving transport outcomes effectively and efficiently.

Bring your ideas for research and data that will further help us better understand and deliver our desired transport outcomes. You might have existing ideas or ideas from the presentations at the conference, all are welcome to be discussed and shared during this workshop.

The research and data ideas need to be summarised briefly as:

1. Evidence need, not necessarily the methodology on a 130 by 80 mm post-it note.
2. The end use, how will the new evidence be applied on another 130 by 80 mm post-it note.

These will be captured on post-its and categorised at the workshop according to the [Transport Outcomes Framework](#) and a measure of scale on multiple dimensions of impact/use/time.

You are welcome to bring your existing ideas for sharing on the day.

We will report back to all registered [Transport Knowledge Conference](#) attendees after the ideas are collated and organised.

Please note that these ideas are being collected based on open intellectual property to be further shared and developed by the [Transport Knowledge Hub](#) to identify research and data priorities.

Some background.

This workshop responds to feedback from previous [Transport Knowledge Conferences](#) where attendees wanted to discuss research ideas more formally than through networking during the conference.

Waka Kotahi [Sector Research](#), Te Manatū Waka's [Domestic Transport Costs and Charges](#) study and the Decarbonising Transport Research Strategy have delivered and identified research and data under the [Transport Evidence Base Strategy](#). A summary of other significant data and research initiatives will also be shared during this workshop.
